

# MEASURING and FABRIC CHART

## Measuring

- Cornices are measured from the back of the left return to the back of the right return.
- Returns are measured from the back of the face of the cornice to the end of the return.
- Note the face width is approximately 2" wider than ordered width.

## Fabric

- Overall width including returns cannot exceed fabric width when railroading is not available

Example:  $\text{desired width} + \text{return}(x2) + 6 = \text{fabric width requirement}$

$$60 + 3+3 = 6 + 6 = 72 - \text{fabric width must be at least } 72''$$

$$60 + 6+6 = 12 + 6 = 78 - \text{fabric width must be at least } 78''$$

- Fabrics marked with 'R' can be railroaded for a cornice even though not an option for a shade. Fabric pattern will run sideways, therefore would not match shade underneath.
